A Report for Webinar on "Agile Methodologies using Devops"

A Webinar on "**Agile methodologies using Devops**" organized on 1.08.2021 for MCA I Year II Semester students by MCA Department, SITAMS, Chittoor. The resource person for this webinar is **Mr. Hari Krishna , Sr. Software Engineer, HCL, Chennai**. He has 2 years of software industrial experience.

Topic highlight

Agile methodology is the one of the latest methodology used recently in the software industry for software development process. This method works dynamically for any change in software development process and it does not affect the existing process even the changes are made and it speed up the development process that is adapted in any kind of software applications.

The resource person explained the agile methodology principles and shown demo of this methodology in Devops tool by taking sample applications and shown the entire process life cycle for that application by this method.

Conclusion

The students understand the usage of this agile methodologies and its process flow with sample applications in Devops tool which would not only to know the usage of this in real industry but also they understand how these can be used for their project development in their curriculum
