II MBA III Semester

22MBA238- Introduction to Python

The department of Management Studies is conducting Introduction to Python Lab for II MBA Students as a part of academic curriculum. An "Introduction to Python" lab is crucial because it provides the foundational knowledge and practical experience needed to start programming in Python, laying the groundwork for further exploration into more complex concepts and applications, making it a valuable starting point for anyone looking to utilize Python in various fields like data science, web development, automation, and more; its accessible syntax and wide range of libraries make it a popular choice for beginners and experienced programmers alike.

The faculty of MBA deals the class and conducts practical session in Business Research Lab. The lab is conducted weekly once with three hours of duration. Each student is given a computer system and executes the experiment using Python Software. The students are assisted with a Technical Lab Assistant.
